brsatoi()

Converts a character string into a DINT value

> This function block can only be used conditionally for **redundancy**.
> The applicable limitations are described in the following sections:
>
> Hidden pointer usage
>
> Additional information can be found in the "Redundancy" section.

Parameters

I/O	Parameter	Data type	Description
IN	pString	UDINT (given as a pointer to STRING)	Address of character string to be converted
OUT	z	DINT	Numerical value of character string

Call syntax (Automation Basic)

z = brsatoi(adr(Str))

Note

The brsatoi function converts a character string into a DINT value.

Examples

Automation Basic
ANSI C
Structured Text
